# 3. Optical Specifications

3.1 LCD Driving Voltage Recommended

| Messrs.               |           |                             |          |              |         |
|-----------------------|-----------|-----------------------------|----------|--------------|---------|
| Product Specification | N/ - 1-1. | odel: MTG-F24160BFWHSEB-18A | Rev. No. | Issued Date. | Page.   |
|                       | Model:    |                             | A        | Oct. 28, 05  | 12 / 12 |

| Parameter                  | Symbol                          | Conditions  | Min.  | Тур.  | Max.  | Units |
|----------------------------|---------------------------------|-------------|-------|-------|-------|-------|
| LCD Driving Voltage Note 1 | V <sub>O</sub> -V <sub>SS</sub> | Ta = -20 °C |       | 21.11 |       | V     |
|                            |                                 | Ta = 25 °C  | 17.89 | 18.49 | 19.09 | V     |
|                            |                                 | Ta = 70 °C  |       | 16.28 |       | V     |

Note 1: Voltage (Applied actual waveform to LCD Module) for the best contrast. The range of minimum and maximum shows tolerance of the operating voltage. The specified contrast ratio and response time are not guaranteed over the entire range.

#### 3.2 Optical Characteristics

Ta=25 °C, 1/160 Duty, 1/13 Bias, (Note 4),  $\theta = 0^{\circ}$ ,  $\phi = --^{\circ}$ 

| Parameter   |              | Symbol          | Conditions                                  | Min. | Тур. | Max.  | Units |
|-------------|--------------|-----------------|---|------|------|-------|-------|
| Contrast Ra | tio Note 1   | С               | $\theta = 0^{\circ},  \phi = 0^{\circ}$     |      | 3.0  |       |       |
| Viewing Ar  | ngle. CR≧2   | Front-Back      | $\theta_f$ - $\theta_b$ , $\phi = 0^\circ$  | +38  | to   | -29   | deg.  |
| (Shown in 3 | 3.3)         | Left-Right      | $\theta_l$ - $\theta_{r,}$ $\phi = 0^\circ$ | +30  | to   | -32   | deg.  |
|             | Rise Note 2  | T <sub>ON</sub> | Ta = -20 °C                                 |      | 2010 | 4020  | msec  |
|             | Decay Note 3 | $T_{OFF}$       | 1a = -20 C                                  |      | 8200 | 16400 | msec  |
| Response    | Rise Note 2  | $T_{ON}$        | Ta = 25 °C                                  |      | 140  | 280   | msec  |
| Time        | Decay Note 3 | $T_{OFF}$       | 1a – 25 C                                   |      | 255  | 510   | msec  |
|             | Rise Note 2  | $T_{ON}$        | Ta = 70 °C                                  |      | 75   |       | msec  |
|             | Decay Note 3 | $T_{OFF}$       | 1a – 70 C                                   |      | 100  |       | msec  |

Note 1: Contrast ratio is defined as follows.

 $CR = L_{OFF} / L_{ON}$ 

L<sub>ON</sub>: Luminance of the ON segments, L<sub>OFF</sub>: Luminance of the OFF segments

Note 2: The time that the luminance level reaches 90% of the saturation level from 0% when ON signal is applied.

Note 3: The time that the luminance level reaches 10% of the saturation level from 100% when OFF signal is applied.

Note 4: Definition of Driving Voltage  $V_D$ . Assuming that the typical driving waveforms shown below are applied to the LCD Panel at /A Duty - 1/B Bias ( A: Duty Number, B: Bias Number ). Driving voltage  $V_D$  is defined s follows:  $V_D = (Vth1 + Vth2)/2$ 

Vth1: The voltage VO-P that should provide 50% of the saturation level in the luminance at the segment which the ON signal is applied to.

Vth2: The voltage VO-P that should provide 50% of the saturation level in the luminance at the segment which the OFF signal is applied to.

3.3 Definition of Viewing Angle and Optimum Viewing Area

| Messrs.               |        |                       |          |              |         |
|-----------------------|--------|-----------------------|----------|--------------|---------|

- 1 Liquid crystal display devices
  - 1.1 The liquid crystal display device panel used in the liquid crystal display module is made of plate glass. Avoid any strong mechanical shock. Should the glass break handle it with care.
  - 1.2 The polarizer adhering to the surface of the LCD is made of a soft material. Guard against scratching it.
- 2 Care of the liquid crystal display module against static electricity discharge.
  - 2.1 When working with the module, be sure to ground your body and any electrical equipment you may be using. We strongly recommend the use of anti static mats (made of rubber), to protect work tables against the hazards of electrical shock.
  - 2.2 Avoid the use of work clothing made of synthetic fibers. We recommend cotton clothing or other conductivity-treated fibers.
  - 2.3 Slowly and carefully remove the protective film from the LCD module, since this operation can generate static electricity.
- When the LCD module alone must be stored for long periods of time:
  - 3.1 Protect the modules from high temperature and humidity.
  - 3.2 Keep the modules out of direct sunlight or direct exposure to ultra-violet rays.
  - 3.3 Protect the modules from excessive external forces.
- 4 Use the module with a power supply that is equipped with an over current protector circuit, since the module is not provided with this protective feature.
- Do not ingest the LCD fluid itself should it leak out of a damaged LCD module. Should hands or clothing come in contact with LCD fluid, wash immediately with soap.
- Conductivity is not guaranteed for models that use metal holders where solder connections between the metal holder and the PCB are not used. Please contact us to discuss appropriate ways to assure conductivity.

## 8. Warranty:

electronic products. It is guaranteed to perform according to delivery specifications. For any other use apart from general electronic equipment, we cannot take responsibility if the product is used in medical devices, nuclear power control equipment, aerospace equipment, fire and security systems, or any other applications in which there is a direct risk to human life and where extremely high levels of reliability are required. If the product is to be used in any of the above applications, we will need to enter into a separate product liability agreement.

- We cannot accept responsibility for any defect, which may arise from additional manufacturing of the product (including disassembly and reassembly), after product delivery.
- 2 We cannot accept responsibility for any defect, which may arise after the application of strong external force to the product.
- 3 We cannot accept responsibility for any defect, which may arise due to the application of static electricity after the product has passed your company's acceptance inspection procedures.
- We cannot accept responsibility for industrial property, which may arise through the use of your product, with exception to those issues relating directly to the structure or method of manufacturing of our product. Microtips-origin longer than one year from Microtips production.
